

8th CUTS-CIRC Biennial Conference on Competition, Regulation and Development

Prioritising Socially Sensitive Sectors

09-10 October
2023

The Metropolitan Hotel, New Delhi
(Hybrid Event)

Background

Convergence of several crises like pandemic, armed conflicts, climate change and the ensuing geopolitical churning are adversely affecting the society, in general, and poorer sects, in particular. Broken supply chains, supply chain abuses, rising inflation, loss of jobs and lack of income opportunities, shortages of food and medicines, faltering infrastructure are some of the social pain points that can be attributed to such crises. All these are adding to the existing socio-economic inequality within and between nations, going against the essence of ‘building back better’ – a call given during the pandemic.

The polity and regulators in their endeavours, therefore, ought to prioritise socially sensitive sectors and issues, such as pharmaceuticals & healthcare, food & agriculture, information & communication, education, jobs etc. In socially sensitive sectors ‘equity’ is as important as ‘investment’ and ‘efficiency’.

In this backdrop, the 8th edition of the CUTS-CIRC Biennial Conference on Competition, Regulation and Development will deliberate upon some of the socially sensitive sectors and issues, from the perspective of the global south. This Biennial is being organised in collaboration with BRICS Competition Law & Policy Centre, Organisation for Economic Co-operation and Development (OECD), and European University Institute (EUI). This Biennial also precedes the 8th BRICS International Competition Conference to be hosted by Competition Commission of India (CCI) in New Delhi from 11 to 13 October 2023.

Though the COVID-19 global emergency is now over, the threat still remains. Most importantly the lessons from the pandemic demand that governments need to rectify the exposed fault lines in the healthcare sector, so that the world is better prepared for the next such emergencies. Relevant existing domestic and international regulations would also need to be revisited. The Biennial will, therefore, delve into some of such regulations that have bearing on competition as well as access to healthcare within and across borders.

Similarly, due to pandemic, climate change and armed conflicts global supply chains are broken, consequently many countries are facing food insecurity. In addition, there are

market-distortionary regulatory and non-regulatory practices having negative effects on production and supply of food and agricultural products within and across borders. This Biennial will deliberate upon some of such market distortionary practices that adversely affect trade and competition in the food and agriculture sector.

The Biennial will also discuss the grim employment scenario prevalent in most parts of the world, particularly the developing and least developed countries, with special emphasis on the gig economy. The fast-digitalising economies have increased the intake of gig workers or platform workers, which may not squarely fall under the traditional concept of ‘labour’, demanding newer approaches for their welfare. The prevalence of high concentration in the digital platform markets is also being seen as one of the causes for the plight of gig workers.

Further, jurisprudence on “climate change (or sustainable development including biodiversity) and competition policy” is taking shape in the west, particularly in Europe. While there is consensus on the graveness of climate change crisis, there are north-south divide on certain issues related with mitigation of and adaptation to climate change. For instance, green technology transfer is becoming a contentious issue, so is the financing of green transition. There is also a pressing consumer protection issue related with ‘greenwashing’. Some of such important, yet contentious, issues will be taken up during the Biennial.

Last but not the least; the Biennial will take up some of the burning issues with respect to the fast-changing paradigm of the Information and Communication Technology (ICT) sector, such as irresponsible use of artificial intelligence (AI) as well as social media, the blurring line between telecommunication and digital technologies etc. Many countries are discussing domestic regulatory frameworks for emerging technologies and their usage, however, there remains a vacuum vis-à-vis any global framework. Though significant clarity has emerged in the recent past, there are still some unsettled issues with respect to dealing with competition concerns in digital economy.

The two-day Biennial Conference will take up the aforesaid issues in its five technical sessions – Regulatory Deficit in Access to Healthcare; Food and Agriculture – Trade and Competition; Employment and Gig Economy – Role of Competition and Regulation; Sustainability, Climate Change and Competition Policy; and Responsible ICT and Inclusive Digital Economy. In addition, there will be an Inaugural Session featuring a few Keynote Speeches; a Dinner Speech by an eminent personality; and a Valedictory Session where thought leaders will chalk out a way forward.

Agenda
